

CHAPTER 5

RESULTS AND DISCUSSION

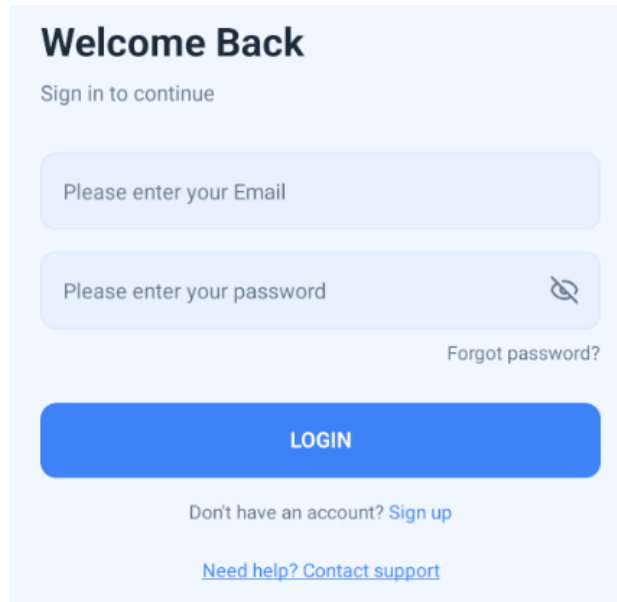

5.1 Main Application

Figure 5.1.1 The Welcome Page

This is the welcome page of the main application. It will appear once only in the start of a fresh installation.

Figure 5.1.2 The Login Page

This is the login page of the main application. It requires an email address and password. It also has the feature forgot password that has the function to reset password and send reset link to email. There's also a contact support feature for assistance. It also routes to sign up page if it's a first-time user.

ID Verification
Verify your identity with your Philippine National ID

Scan QR Code from Philippine National ID

Scan QR Code
Scan the QR code from the back of your national ID

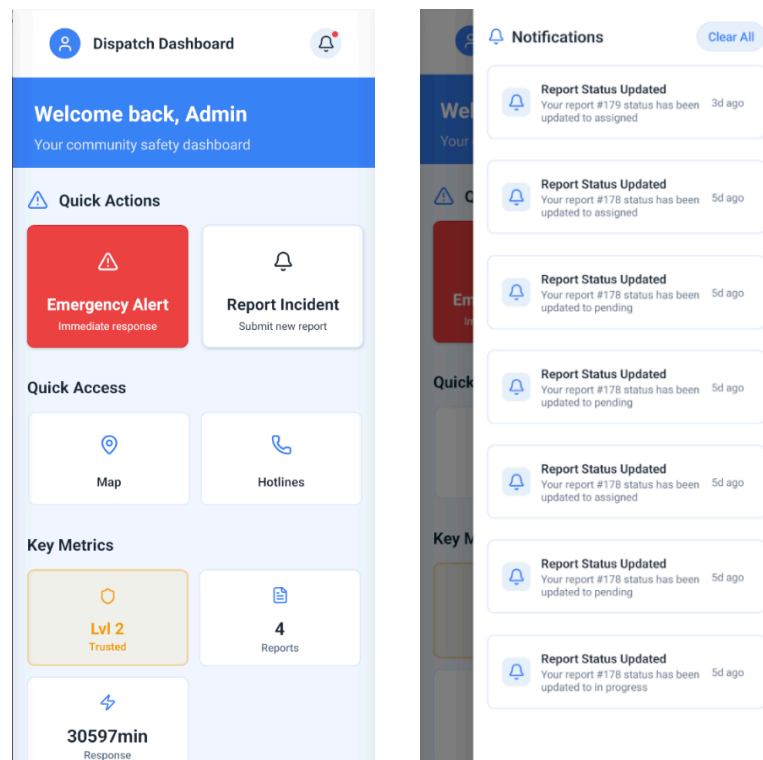

Upload QR Image

Back **NEXT STEP**

All data is encrypted and secure

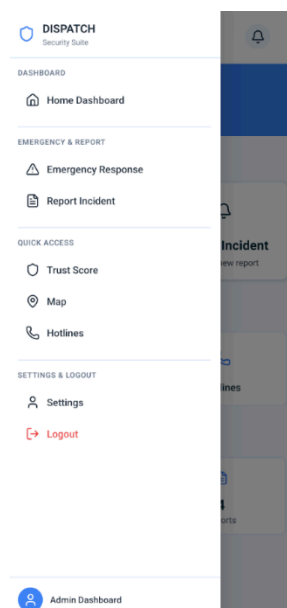

The next step is to verify all the information using a QR code scanner by scanning the QR code from the Philippine National ID or by uploading the QR image. Once verified it will send an email verification link to the email address provided. If the information is invalid it let you redo the information on the first step until correct.

Figure 5.1.4 Dispatch Home Dashboard

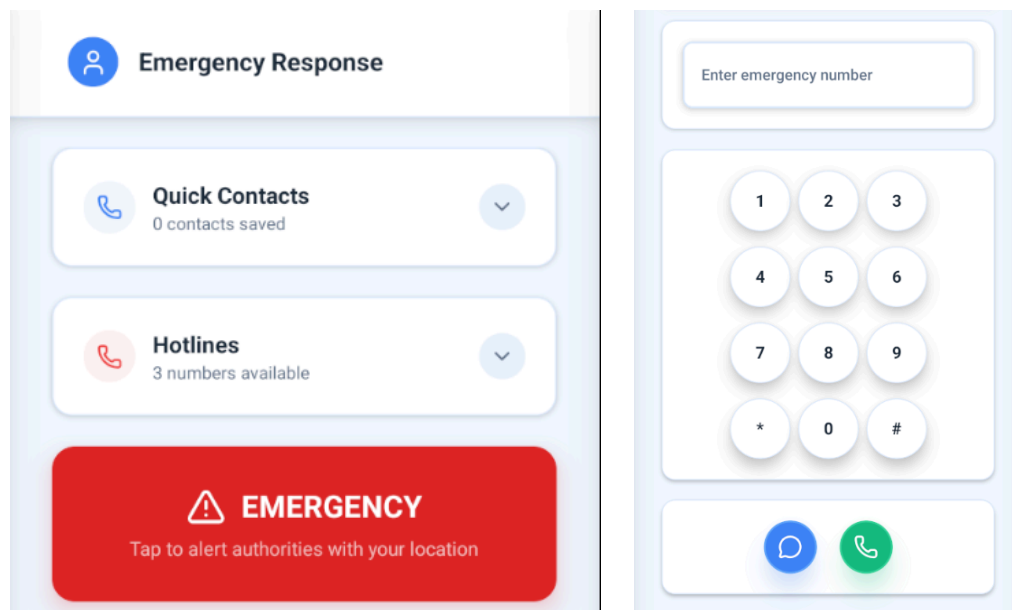

The home dashboard consists of a message saying, “Welcome back [name]”. It has three sections consisting of quick actions, quick access, and key metrics. Quick actions consist of emergency alert and report incident. Quick access consists of the map and hotlines. Lastly, key metrics consist of the trust score, reports, and the response time.

Figure 5.1.5 Dispatch Sidebar

The sidebar consists of the pages of the home dashboard with a settings and logout page. This is useful when the user wants to go to a specific page without going back to the home screen.

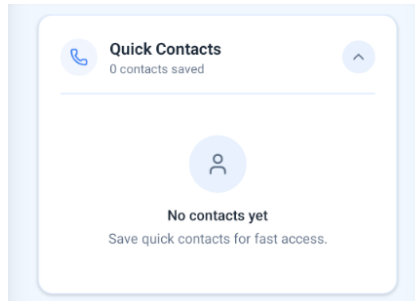

Figure 5.1.6.1 Emergency Alert Page

The

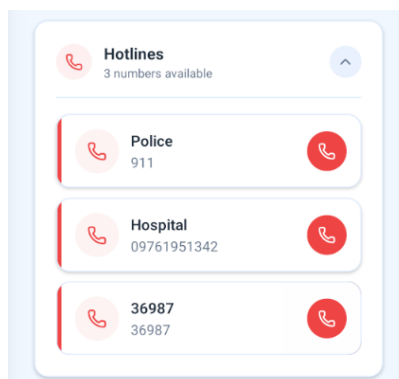

emergency alert page consists of the quick contacts, hotlines and a keypad interface for message and call services. The message and call services routes to the phone's default applications for such services as the application does not have built-in tools for these services.

Figure 5.1.6.2 Emergency Alert Quick Contacts

The quick contacts are for the user's personal saved contacts.

Figure 5.1.6.3 Emergency Alert Hotlines

The main difference between the quick contacts and hotline is that some hotlines are provided by the system and cannot be deleted. Hotlines are for public contacts.

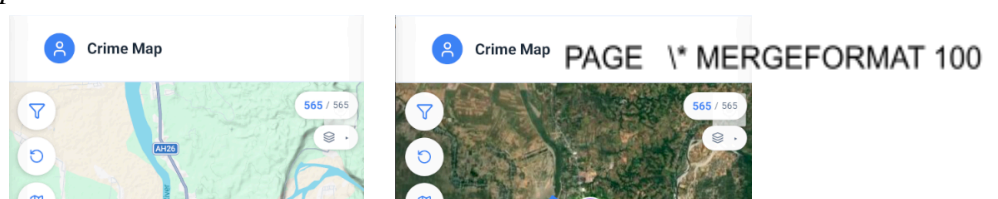

Figure 5.1.7.1 Report Incident Quick Links

The report incident quick links serve to complete the report incident form swiftly for the purpose that an incident is of utmost importance, or the user does not know what type of report he/she will report. It has two appearances with either scroll or grid type.

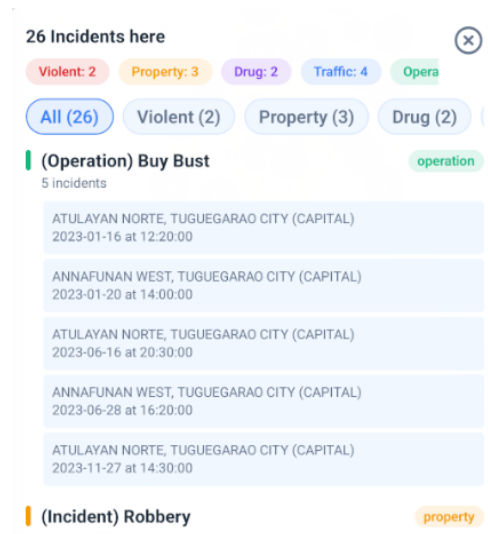

Figure 5.1.7.2 Report Incident

The report incident fill up form consists of time, place, title, category which has its own subcategories, details and evidence which can be a photo, audio or document. The category is dropdown and the subcategory is to be chosen based on the category. The user can select either the current time and date or do it manually. They can search the location, select the location on the map or use the current location and have an optional nearby landmark location. Though the location should only be within the vicinity of Tuguegarao City.

Figure 5.1.8.1 Map

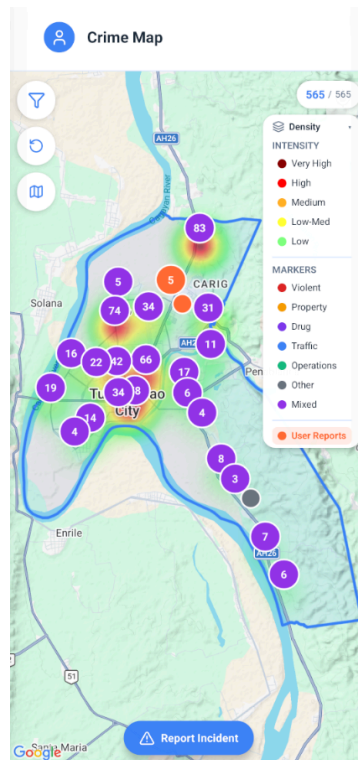

The map consists of the boundary of Tuguegarao City and within that boundary are the user reported and police documented crimes. The crimes that are near each other are clustered.

Clicking one clustered circle shows the incidents that happened there with their location, time, category and how many incidents in that area.

Figure 5.1.8.2 Map Legends

The legends are intensity, which is how many crime has been committed in that area, or its density. It also shows the markers for different categories of time. Each legend is clickable and can filter out the map

Figure 5.1.8.3 Map Filter

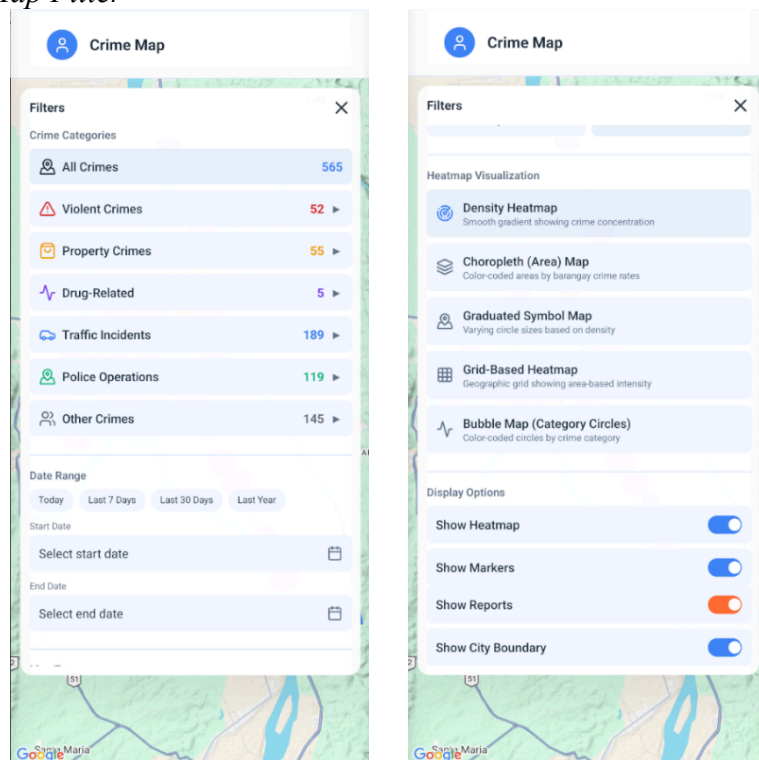

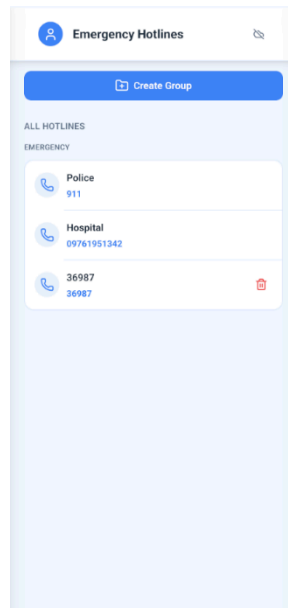

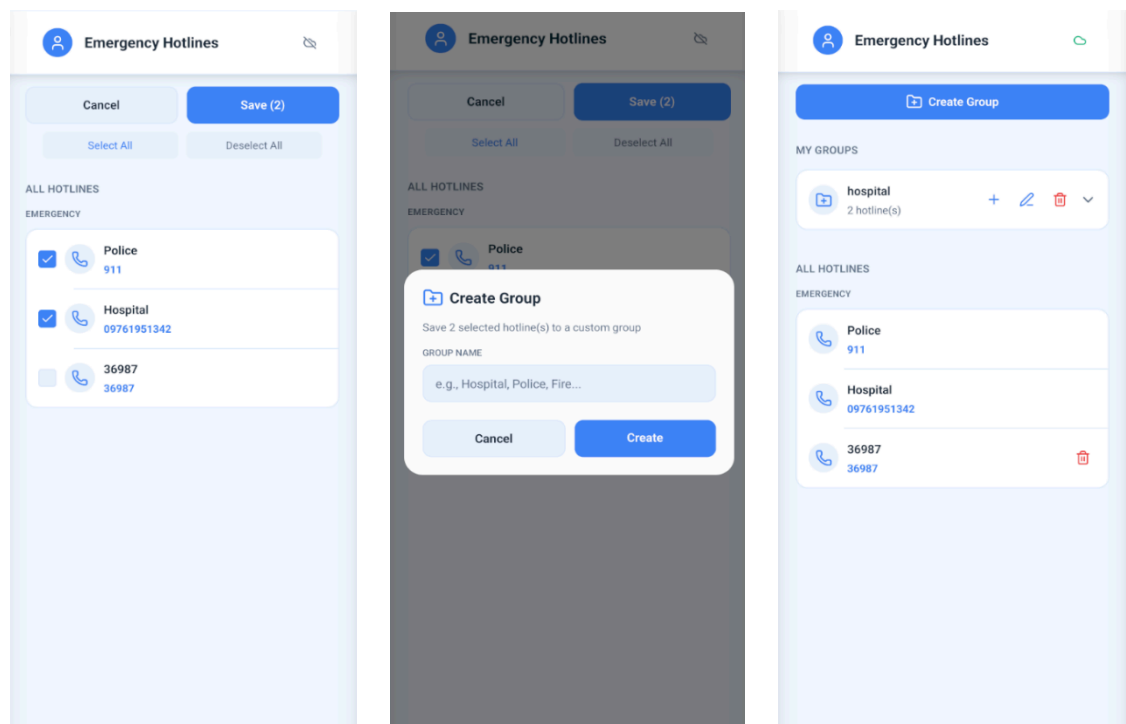

Figure 5.1.9.1 Hotlines

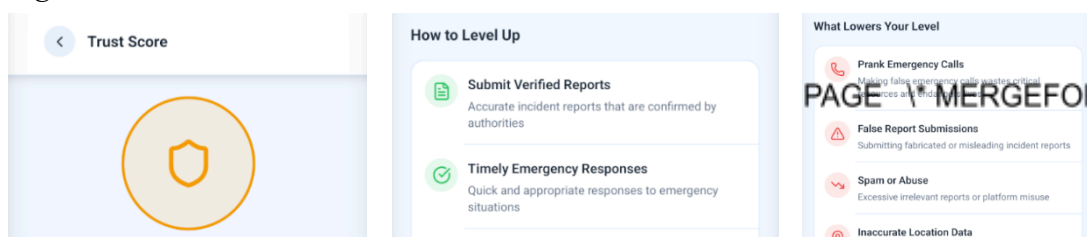

The hotlines page provides the public contacts. Some are provided by the system and cannot be deleted, and some can be inputted by the user through the emergency alert page.

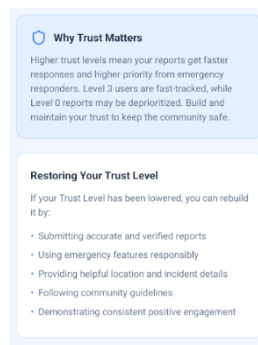

Figure 5.1.9.2 Hotlines Group

The hotlines can be grouped into whatever group the user desires. The group can be added, edited, and deleted.

Figure 5.1.10 Trust Score

The trust system serves to deter users who engage in malicious use of the app such as prank emergency call, false report submissions, spam or abuse, inaccurate location data, unverified information and community guidelines violations. There are four levels with high priority at the highest level and no priority at the lowest level. To level up the user can submit verified reports, timely emergency responses, accurate location information, and consistent platform use.

Figure 5.1.11.1 Cases

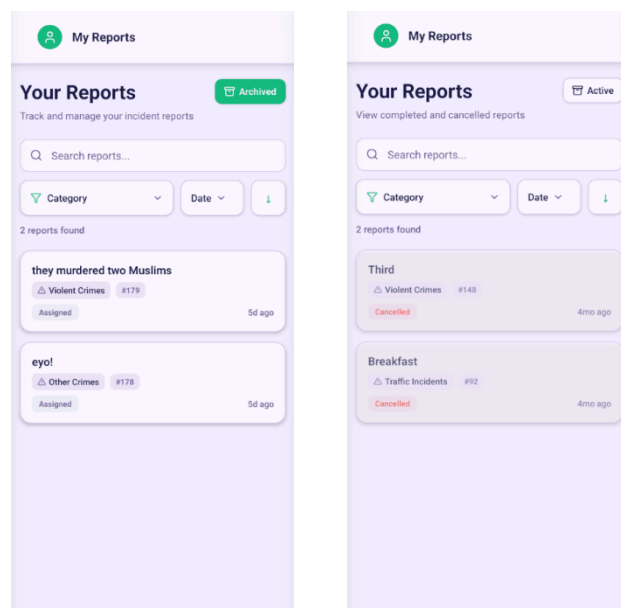

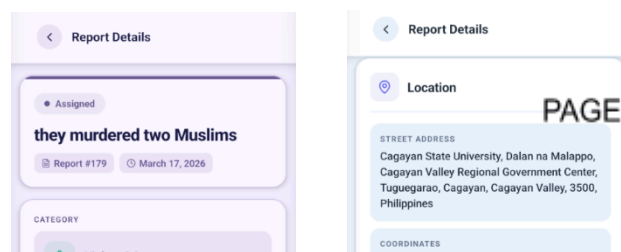

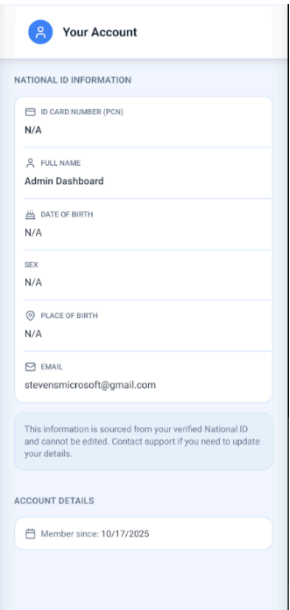

Figure 5.1.11.2 Reports

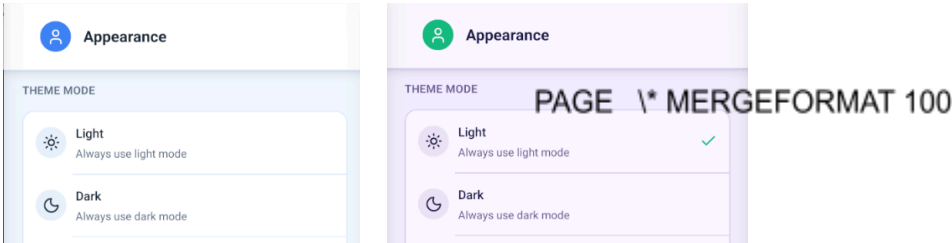

The reports page list the previous reports. It details the title, report number, date and time of the report, category, location with its coordinates, incident details, and additional info. It tells if the report is either assigned, pending, cancelled or completed.

Figure 5.1.12 Profile Details

The profile lists PCN, full name, date of birth, sex and place of birth in the national ID card along with the email address and time and date of account made.

Figure 5.1.12 Appearance Settings

The appearance can be changed depending on theme, accent color and background.
